Room tally card

Your AI, as files you own. Learn it in an hour. Run it on any computer. Hand it to anyone. One card per room. Numbers only, never names.

Date and place	
Your host number (any number you pick, the same every time)	
How many arrived (someone who comes twice counts twice)	
How many had Copilot ready when they arrived	
How many had never written code	
Finished: at the start everyone told their Brainstem one fact. How many finished all six steps within 60 minutes, then closed it, opened it again and got the fact back?	
How many said they will host a room	
The hardest step today (one or two words)	
A week later: ask once in the room's group chat "still using it?" How many said yes?	

Text the numbers to the person who asked you to host. That is all we count. Run the room with the room guide.
