Room tally card

Your AI, as files you own. Learn it in an hour. Run it on any computer. Hand it to anyone. One card per room. Numbers only, never names.

Date and place	
1. How many arrived	
2. How many were taking the hour for the first time	
3. How many had Copilot ready when they arrived	
4. Finished: at the start everyone told their Brainstem one fact. How many finished all six steps within 60 minutes, then closed it, opened it again and got the fact back?	
5. Of those who finished, how many were first-timers	
6. Of those who finished, how many had never written code	
7. How many said they want to host a room (give them this card's link and the room guide)	
8. You: is this the first room you have hosted?	
9. You: what brought you here? Someone from RAPP, another host, a room you took, or you found it	
The hardest step today (one or two words)	
A week later, ask once in the room's group chat: "If you finished, are you still using it?" How many said yes? (No answer counts as no.)	

Post the numbers at github.com/kody-w/rapp-seeds, Room tally, the same day; add the week-later number as a comment. Anyone with a GitHub account can post, and everyone in the room has one. That is all we count. Run the room with the room guide.
